- Worked on the first batch of "Annie" devices for the United States Market.
- Assisted in optimizing the OTA system, streamlining the update process, and reducing downtime %, resulting in improved customer satisfaction and higher engagement metrics.

PROJECTS

SysPerf: Sysperf helps developers by displaying current CPU, Memory usage and Battery health while being as light as possible so that it can be deployed on servers with minimal effort.

Cloudstore: Cloudstore is an attempt to make a FOSS e-commerce template that can be used to make your own site, coupled with load balancing and ingress controllers deployed on a K8S cluster.

Judson: A rust based service to store your abandoned projects, by zipping them and performing measures to help reduce the memory consumption.
